Professional Summary

Data & Automation Analyst with experience in **SQL, Python, Power BI, BigQuery** and building automation pipelines (**n8n**). I work at the intersection of data, **applied AI** and operational process automation – from pipeline reliability and modeling to executive dashboards, cross-system integrations and AI-powered solutions. Seeking opportunities in data, AI and automation where analytical depth and technical autonomy are valued.

Professional Experience

Uproot Clean

USA, Remote

Data & Automation Analyst

Apr 2026 – Present

- Configure, optimize and automate **Auto-Pilot order and shipping status** processes with **AI-generated responses**, increasing the automated response rate by **40% of total volume** and significantly reducing escalation to human agents.
- Build **n8n pipelines** for validation, cross-checking and data migration between platforms, including proactive notifications and alerts on critical operational events.
- Design **SQL tables and queries on BigQuery** for extraction and consolidation of operational data, with **Metabase** dashboards supporting decision-making.
- Collaborate with **international stakeholders** (in English) to analyze processes, identify automation opportunities and design scalable solutions for support and content operations.

Rede Primavera de Saúde

Aracaju, Brazil

Business Analyst I (Data & BI)

Oct 2025 – Mar 2026

- Maintained and evolved **100+ Power BI dashboards** (DAX, Power Query, tabular modeling) used by 140+ users, including directors, coordinators, supervisors and C-level executives, across operational and financial domains.
- Managed and monitored **200+ ETL jobs** on an in-house monitoring platform, ensuring data integrity and SLA compliance across OracleSQL, PostgreSQL and SQL Server environments.
- Wrote and optimized **complex SQL queries** (window functions, CTEs, joins) for ad hoc analyses, KPI extraction and executive reporting across multi-database environments.
- Co-defined and delivered a **physician performance report** covering 2,000+ clinical staff, with multidimensional KPIs (clinical, financial, production, research) developed jointly with the Medical Relations team and extracted from the Tasy ERP.
- Standardized **corporate metric definitions** across departments, eliminating conflicting KPIs and ensuring a single source of truth for strategic decisions.

Rede Primavera de Saúde

Aracaju, Brazil

Data & Business Intelligence Intern

Feb 2025 – Oct 2025

- Developed a **full-stack pipeline monitoring platform** (Python, FastAPI, JavaScript) to track 200 jobs in real time, reducing failure detection time by **90%** and enabling proactive bottleneck planning.
- Built **Python automation scripts** (Pandas, NumPy) for report generation, data transformation and cleaning, eliminating **over 2 hours of manual work per day**.
- Built semantic models and Power BI dashboards standardizing KPI definitions across departments, directly contributing to data governance initiatives.
- Documented data flows, business rules and table lineage, improving team onboarding and long-term maintainability.

Personal Projects

Length of Stay (LOS) Prediction – Machine Learning Pipeline

henriquevalentin.vercel.app/work

- Built an **end-to-end ML pipeline** to predict Length of Stay (LOS) with a hybrid approach: **Survival Analysis** (Lifelines, Kaplan-Meier) for discharge dynamics and **XGBoost** classification to predict long-stay risk.
- Performed feature engineering with **censored data** handling and seasonality treatment; applied **SHAP values** (Explainable AI) to identify the strongest predictors for bed management decisions.

Multi-Agent Simulation – Swarm Intelligence for Operational Planning

henriquevalentin.vercel.app/work

- Conducted **exploratory data analysis** on 39 months of operational records (45,000 admissions, 276,000 ER encounters) to build the knowledge briefing and seed material needed to configure and run the open-source Swarm Intelligence engine **MicroFish** for flow simulation and seasonal stress testing.

Skills

- **Business Intelligence:** Power BI, DAX, M, Power Query, ETL, Tabular Modeling, KPI Design, Dashboards
- **SQL & Databases:** OracleSQL, PostgreSQL, MySQL, SQL Server, BigQuery, Window Functions, CTEs, Query Optimization
- **Python for Data:** Pandas, NumPy, Matplotlib, Scikit-learn, XGBoost, SHAP, Lifelines, data automation
- **Automation & Integrations:** n8n, REST APIs, GraphQL, SaaS integrations, webhooks, AI / LLM-assisted automation
- **Machine Learning:** Supervised Learning, Survival Analysis, Explainable AI (XGBoost, SHAP, Kaplan-Meier)
- **Data Engineering:** Pipeline Monitoring, Data Quality, Data Lineage, ETL, FastAPI, Metabase, Tasy ERP
- **Languages:** Portuguese (Native), English (Advanced)

Education

Federal University of Sergipe (UFS)

Aracaju, Brazil

Bachelor's in Information Systems

Aug 2022 – Mar 2027 (expected)
